

3. **Pre-Feeding Chewing Hierarchy Level #3:** Present one yellow Chewy Tube® (or tool of choice throughout the exercise) on the client's lateral incisor (D) and facilitate a bite. Immediately present the second Chewy Tube® (tool) and facilitate a bite (D). Work left to right and right to left 4-5 repetitions x 2 sets. The use of two Chewy Tubes® (tools) reduces rooting and extraneous head movements, and encourages jaw stability and a dissociated bite.

4. **Pre-Feeding Chewing Hierarchy Level #4:** Present the tool of choice on the client's first molar (B1). Provide stability with your non dominant hand as needed. Encourage the client to do 5 small graded bites: first molar (B1), lateral incisor (D2), front central incisor (E3), lateral incisor (D4), and first molar (B5) on the opposite side. Work 4-5 times right to left, 4-5 times left to right for 2 sets. Note that everyone has a stronger side; however, if your client has significant weakness on one side you may work 2 times on the weaker side as opposed to 1 time on the stronger side.
